

Oasis Dehumidifiers

The Multifunctional Dehumidifier for Year-round Use

Oasis Home Dryer – the multifunctional dehumidifier for year-round use.

To ensure your home is healthy, you must first ensure it is dry. Preventing moisture in your home will not only protect your furnishings and property, but also your family's wellbeing.

Mitsubishi Electric Dehumidifiers are designed to be multifunctional home dryers. As well as targeting and extracting moisture from your home, additional features such as laundry drying, mildew prevention, and air purification ensure a healthier home for your family.

OASIS

Made in Japan.
Designed for New Zealand conditions.

Multifunctional Home Drying

Mitsubishi Electric Oasis Dehumidifiers are amongst the most powerful dehumidifiers available. Our range can remove up to 16 or 22 litres of moisture from your home per day.*

Easy-to-select modes such as Auto, Easy Dehumidifying and Laundry make this a truly multifunctional home dryer at the touch of a button.

*measured at 30°C with 80% relative humidity.

Laundry Mode

As an alternative to harsh and inefficient tumble dryers, the Oasis Series can be used to quickly and efficiently dry your clothing without compromising delicate fabrics. Dry your clothes and the room simultaneously!

Easy Dehumidifying Mode

The Oasis Series is able to constantly monitor room temperature, selecting the optimal humidity level and adjusting operation to suit, saving you both time and money.

Auto Mode

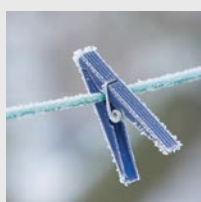

This mode allows you to set the desired humidity level from 50-70%. The Oasis Series will turn off once this is reached to save energy, resuming operation automatically if the humidity level rises.

Multi Directional Drying

Both models allow you to select the direction of airflow; upward, to the rear or wide, allowing you to direct the dry air wherever you desire.

Additional Features

Superior Winter Performance

The Oasis Series is able to remove moisture from the air in temperatures as cold as 1°C. They do this by utilising hot gas defrost, rather than an electrical heater; saving you money without compromising on comfort.

Slim and Light

Stylish, slimline casing and carefully placed air inlets allow the Oasis Series to be positioned along walls, next to windows, or in other tight spaces. Starting at only 11.7kg the Oasis Series is among the lightest available, making them easily transportable.

Purifies the Air and Combats Allergies

The New Zealand Business Council for Sustainable Development has found that nearly half of homes in New Zealand are mouldy. Mould and mildew can lead to respiratory problems and skin rashes.

Oasis Dehumidifiers are designed to combat mildew, mould and dampness in walls, furnishings and carpets – removing allergens from the air as it is passed through the antibacterial filters. This helps to create a drier, healthier home.

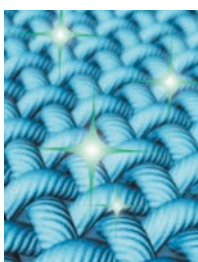

High Humidity Indicator

Dust mites are a common trigger of asthma and allergies. They thrive in high humidity conditions. The Oasis Series will alert you when the humidity reaches 75% - even when it is not in operation! This enables you to lower the humidity and prevent dust mites from breeding.

Mildew Guard

While in this mode the dehumidifier automatically lowers humidity levels to a low 40 to 50% once a day for between 2 to 4 hours depending on the size of the room. At these low humidity levels mildew growth is suppressed as new spores are unable to be produced.

Washable Air Purifying Filter

A two-layer photocatalytic filter helps remove pollen and dust particles and absorb odours for cleaner, healthier air. This filter is easily washed and should only need replacing once every two years!

Air Purification & Allergen Filtration

Oasis Dehumidifiers have a built-in air purification system to remove dust and pollen from the air.

Easy to Use LCD Display

The entire Oasis Series incorporates an LCD display screen for ease of use. Each mode is easily enabled and humidity sensors indicate real time humidity, so moisture control is a breeze.

Permanent Drainage

Moisture can build up in boats, caravans and holiday homes when closed up for long periods of time. To prevent moisture build up, a permanent hose attachment* can be used for continuous operation.

*Attachment must be purchased separately.

Why Dry Your Home?

Moisture build-up is a real problem for New Zealand's heavily insulated modern homes. A family can generate up to 15 litres of moisture per day through breathing, cooking, bathing, heating and drying clothes.

Inadequate ventilation can lead to mildew, mould and excessive dampness – compromising the health of your family and the structural integrity of your home. The Oasis Series of dehumidifiers are advanced home dryers that help your home to “breathe” properly by effectively controlling moisture, dampness and mildew.

The Oasis Range

Designed specifically for effective moisture removal in high humidity, the Oasis Series of Dehumidifiers are amongst the most powerful available.

Offering you stylish and unobtrusive home drying, with market leading technology and the ability to operate down to 1°C – you can be assured they will perform year-round.

Up to 22L per day

Super Quiet Operation

Noise Level Comparison

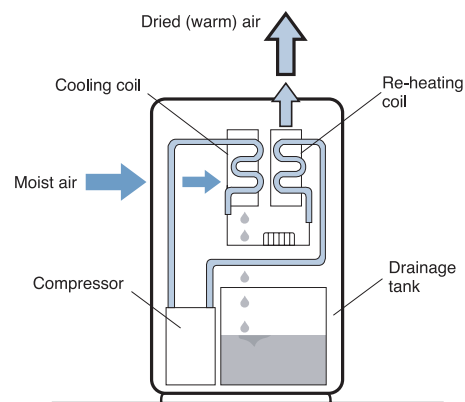

Using technology created by the makers of Mitsubishi Electric's whisper quiet heat pumps, the Oasis Series are incredibly quiet dehumidifiers. The Oasis 16L dehumidifier starts from a low 37dBA, ensuring your home stays dry... and quiet.

How a Dehumidifier Works

Working on the same principle as a refrigerator, moisture-laden air is drawn into the dehumidifier and passed over a cold, 'refrigerated' coil. The damp air condenses on the cold coil into water droplets which are collected in the water tank. The air is then passed over a warm coil and sent out from the dehumidifier, providing you with clean, dry air.

In cold conditions the water that is passed over the cold coil may freeze, therefore it is important that a dehumidifier has an efficient way of coping with this. Mitsubishi Electric Oasis Dehumidifiers utilise a hot gas defrost system, enabling hot gas to be transferred into the cold coil, reversing the freezing process. Without this, a dehumidifier would have to rely on the temperature rising or employ a power drawing heating system.

Upon first use, your dehumidifier will remove moisture that has accumulated in the wall linings, carpet and furnishings. For this reason, it is important to run the dehumidifier constantly for the first few weeks. Once a healthy humidity level is reached, the dehumidifier can be used to simply maintain this.

Specifications

Features		MJ-E16VX	MJ-E22VX
Moisture Removal Capacity		16L per day (30°C, 80% RH)	22L per day (30°C, 80% RH)
